

Computer Algebra: Exercise mode

Winter semester 2020/2021

The exercise part consists of weekly exercise sheets and a project. Exercise sheets are distributed via the website <https://www.risc.jku.at/education/courses/ws2020/ca/>. The project consists of a programming part and a report. Details on the project will be announced in December.

A list with the current exercises will be available at the beginning of each exercise session. Each student should indicate the exercises he/she has solved and is willing to present in front of the class. During the session, students are called at random to present their solutions.

Grading: The course grade is determined by the number of solved exercises and the number of points on the project. Let E be the percentage points of solved exercises and P be the percentage points on the project. The course grade is determined according to the subsequent scheme:

Sehr gut (1)	\Leftrightarrow	$G \in [87.5, 100]$
Gut (2)	\Leftrightarrow	$G \in [75, 87.5)$
Befriedigend (3)	\Leftrightarrow	$G \in [62.5, 75)$
Genügend (4)	\Leftrightarrow	$G \in [50, 62.5)$
Nicht genügend (5)	\Leftrightarrow	$G \in [0, 50)$,

where $G = (E + P)/2$.
